

Amendments to the Claims:

This listing of claims will replace all prior versions, and listing, of claims in the application.

1-16. (cancelled)

17. (new) An interactive system for building, and sharing one's own databank of Wisdom Bytes, such as Words of Wisdom, Basic Truths, and /or Facts and Feats on any subject, in one or more languages, using a computer system comprising:

- a) a User Interface;
- b) one or more well-classified databases to store data user wise including a Wisdom Byte Bank Database, Translation Database, User Database, and Configuration Database;
- c) at least one well classified data input organizing and management module, said data is stored in the form of records in the databases;
- d) modules for sharing, invoking, storing, for continuous motivation and for improving one's knowledge of Wisdom Bytes such as Words of Wisdom, Basic Truths, and/or Facts and Feats, using the data from the databank, said data having been selected by a user by finding the same from the databank by none or one or more "FIND" conditions; and
- e) a control system acting as a bridge between the User Interface and the databases.

18. (new) The system according to claim 17 wherein the "FIND" conditions are defined by classifications comprising a Date, Record ID, Language, Source of Information, Type of Wisdom Byte, Subject and Sub Subjects, and by keywords, wildcard characters, File Attachments or Bookmark Remarks, including "Favorite".

19. (new) The system according to claim 17 wherein the modules include a Wisdom Bytes Session Module allowing the user to invoke and store a Wisdom Bytes Session for continuous motivation and for improving one's knowledge of Wisdom Bytes such as

Words of Wisdom, Basic Truths, and/or Facts and Feats, using the data from the databank, said data having been selected by the user by finding the same from the databank by none or one or more “FIND” conditions.

20. (new) The system according to claim 17 wherein the modules include a Wisdom Bytes Scheduler Module for allowing the user to schedule the Wisdom Bytes such as Words of Wisdom, Basic Truths, and/or Facts and Feats, by finding the same from the databank by none or one or more “FIND” conditions and said Words of Wisdom, Basic Truths, and/or Facts and Feats are brought up on the user's computer system at preset time intervals.

21. (new) The system according to claim 17 wherein the modules include an Export Module for allowing the user(s) to export data from the databank, said data having been selected by the user(s) by finding the same by none or one or more “FIND” conditions.

22. (new) The system according to claim 17 wherein the modules include an Import Module for allowing the user(s) to import data built by other user(s).

23. (new) The system according to claim 22 wherein the Import Module further includes a utility for selectively importing the data.

24. (new) The system according to claim 17 wherein said data input organizing and management module allows the user to classify the data by well-defined classifications comprising Date, Language, Source of Information, Type of Wisdom Byte, Subject and Sub Subjects.

25. (new) The system according to claim 17 wherein the modules include a Global Attachment Module for allowing the user to attach image, animation, or sound files to a record in the database.

26. (new) The system according to claim 17 wherein the modules include a Global Association Module for allowing the user to associate files, URLs, or remarks to a record in the database.

27. (new) The system according to claim 17 wherein said data input organizing and management module further includes a utility for copying of existing classification and previously entered data for new data input by the user for ease of data entry.

28. (new) The system according to claim 17 wherein the modules include a Global Modification Module for allowing the user to modify a record in the database individually and globally.

29. (new) The system according to claim 17 wherein the modules include a Global Delete Module for allowing the user to delete a record in the database individually and globally.

30. (new) The system according to claim 17 wherein the modules include a Recycle Bin Module for allowing the user to restore or permanently remove a Record individually or plurally from the database.

31. (new) The system according to claim 17 wherein the modules include a report Module for allowing user to print reports and/or graphs from the data in the databank, by none or one or more "FIND" conditions.

32. (new) The system according to claim 17 wherein the modules include a Global Bookmark / Unbookmark Module for allowing the user to bookmark or unbookmark a record in the database, individually or globally with Bookmark Remarks including "Favorite".

33. (new) The system according to claim 17 wherein the modules include a Translation Module as well as a Global Translation Module for allowing translation of a record in the database, from one language into another of the user's choice, individually or globally.

34. (new) The system according to claim 17 wherein the modules include a Tools/Help Menu Options Module for allowing the user to select an option for customization including system maintenance and updating of the database.

35. (new) The system according to claim 17 wherein the modules include a Master Module for allowing the user to create and store masters for well-defined classifications.

36. (new) The system according to claim 17 wherein the modules and utilities of said modules are adapted to operate within a browser and/or other viewing and/or processing programs and to operate on one or more computer systems including hand held devices.
